

SQL PROJECTION PIZZA SALES

WELCOME TO PIZZA SALES PROJECT

🔍 In this project, I performed an in-depth analysis of a pizza sales dataset using MySQL. The dataset included information on customer orders, pizza types, sizes, prices, and quantities sold.

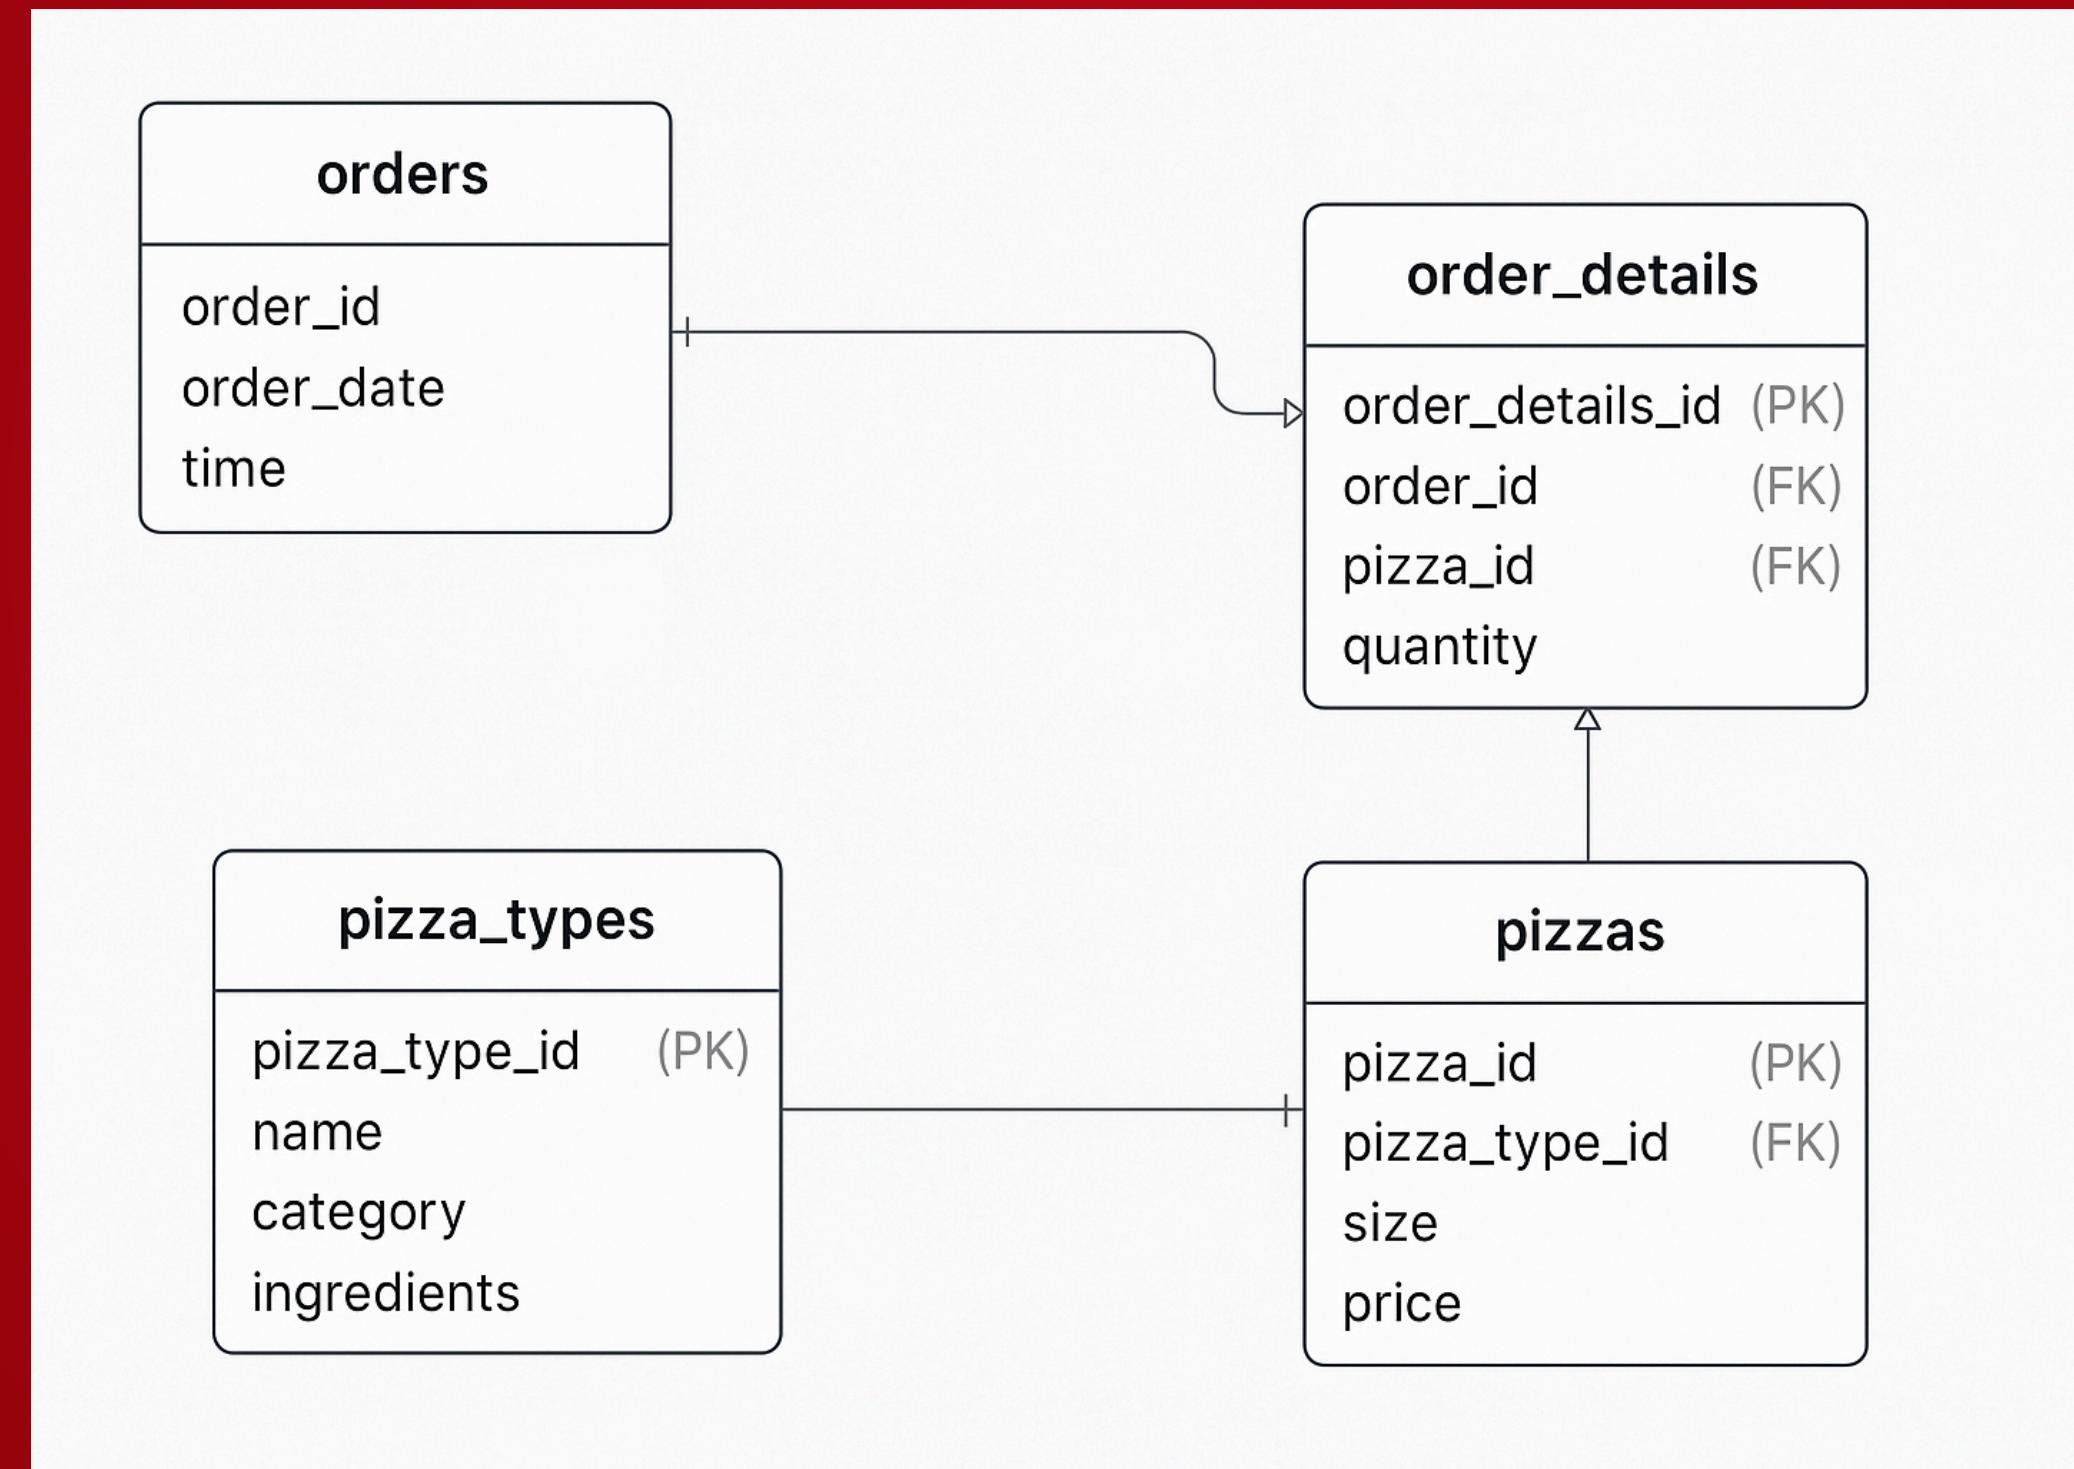

The main objective was to extract actionable business insights using SQL queries, categorized into three levels:

- Basic Analysis: Understanding order volume, revenue, and popular pizzas.
- Intermediate Analysis: Exploring time-based trends, category performance, and daily averages.
- Advanced Analysis: Calculating revenue contribution by category, cumulative revenue, and top-performing pizzas using advanced SQL techniques like window functions and ranking.

This project helped me strengthen my knowledge of:

- Joins
- Aggregations
- Grouping & Filtering
- Window Functions
- Subqueries & CTEs
